Experience

Elvee Ltd

Software Engineer

Jun 2026 – Present

Remote

- **Drove backend architecture and technical direction** by evaluating architectural trade-offs, designing scalable solutions, and establishing engineering standards that improved code quality, reduced technical debt, and accelerated feature development.
- **Simplified complex application workflows** by redesigning shared components, consolidating duplicated business logic, and improving system modularity, enabling faster development, easier maintenance, and more consistent implementations across the codebase.
- **Owned production delivery from design to deployment** by collaborating with product stakeholders to translate evolving business requirements into scalable technical solutions, proactively resolving production issues, and ensuring stable, reliable feature releases.

Elaunch Solutions

Software Engineer

Jan 2023 – Apr 2026

Surat, Gujarat

- **Architected modular backend services** using Node.js, NestJS, Express.js, and TypeScript, designing scalable REST APIs and reusable service layers that accelerated feature development while simplifying long-term system maintenance.
- **Improved backend performance by 2–3×** through Redis caching, database query optimization, asynchronous job processing, and efficient indexing while scaling the platform with Redis Pub/Sub, PM2 Cluster Mode, and background workers, reducing average API response times by over **60%** and supporting high concurrent traffic.
- **Built a centralized authentication and authorization framework** using JWT, OAuth, RBAC, and API encryption/decryption, strengthening application security and providing consistent access control across multiple production applications.
- **Engineered real-time communication features** using Socket.IO and WebSockets to power instant messaging, live notifications, and event-driven updates, delivering low-latency experiences for interactive applications.
- **Implemented automated CI/CD pipelines** using Docker, Kubernetes, Jenkins, and GitHub Actions, eliminating manual deployment steps and improving deployment consistency across environments.
- **Optimized frontend performance** using React, Next.js, React Query, Zustand, lazy loading, image optimization, and code splitting, reducing initial page load time by nearly **40%** and delivering a faster, more responsive user experience.

Education

Gujarat Technological University

Bachelor of Engineering in Computer Engineering: CGPA:8.39/10

2019 - 2023

Ahmedabad, India

Technical Skills

Languages: JavaScript, TypeScript, Python

Backend: Node.js, NestJS, Express.js, GraphQL, Socket.IO

Frontend: React.js, Next.js, HTML, CSS

Database: MongoDB, MySQL, PostgreSQL, Redis

DevOps: Docker, Kubernetes, AWS, CI/CD (Jenkins/GitHub Actions), PM2

Others: Git, Data Structures, REST APIs, WebSockets

Projects

CoolMatch – Social Connection & Video Chat Platform | NodeJS, ExpressJS, Redis, MongoDB January 2025

- Developed a cross-platform social networking application enabling users to connect and interact through text, voice, and video chat.
- Focused on scalability, user safety, and smooth communication under high concurrent traffic. Enabled monetization through in-app purchases and subscriptions, driving consistent revenue growth.

Leylix – Event Planning & Communication Platform | NestJS, NextJs, Socket.io March 2024

- Developed a social event and community platform enabling users to discover, host, and sponsor events with integrated ticketing and venue search.
- Implemented real-time communication features including group chats, audio/video calls, contact management, and interactive polls.

FEX Wallet | Node.js, Express.js, Redis, Sequelize June 2023

- Engineered enterprise-grade cryptocurrency wallet with multi-asset support (crypto + NFTs) for business clients.
- Leveraged third-party APIs for seamless integration of data analytics tools, thereby enhancing project functionality and enabling real-time insights for informed decision-making.
